 Doggy GOO	WELL (#3)	STRESSed	STRESSed	STRESSed	STRESSed	WELL	WELL
 GOO Gut Rescue (#2)	WELL (#3)	WELL	WELL	WELL	WELL	WELL	WELL

### Comments:

#### #1) Suggested Protocol for an Itchy Atopic Canine.

Firstly, Please understand that the Health Profile of every Animal is different. And many Co-Factors i.e. Breed, Age, Co-Illness, Past / Present Med's, Exercise, Diet etc. come into play relative to your Animal's Health and Progress ( Or Not ) relative to their Allergy Status. It is for this reason that your Trusted DVM is your absolute best Synergized Source of Medical Advice for your Animal, Pls consult your DVM with any GOO Questions.

This Protocol suggests inclusion of GOO Gut Rescue if Antibiotics / Steroids have been consumed in past 4-6 Mo..

OR, if MED's have not been Consumed, this Protocol can be used because GOO Gut Rescue has been formulated by GOO's Dr. Kristin to "Enhance / Support" Doggy GOO's Enviro Fighting Effort, as we as to establish a Healthy GUT MicroBiome, which is paramount to Systemic / Overall Health / Immunity. As always, it is paramount to consult your DVM for all Health related Issues.

#### #2) Continue GOO Gut Rescue with Doggy GOO at a WELL Amount til 1 Container is Consumed.

If you desire, Continue at WELL amount for a 2<sup>nd</sup> RESCUE Container if Antibiotics / Steroids have been used in past 4-6 Mo. or if you just want to make sure your Animal's GUT is GOO Healthy.

#### #3) First Week acclimates Animal's "System" to GOO.

As well as establishing a GOO Lick / Lick Tasty Treat Routine. If possible, GOO at 50% AM & 50% PM Daily Amounts is preferred, but if not Schedule possible 1X / Day = OK.

#### #4) Based on Animal's Successful 1<sup>st</sup> Week Tolerance of GOO, move to STRESSed for Doggy GOO and WELL for Rescue.

#### #5) GOO Pet Parents tell us that they begin to see improvement in the Animal's Skin & Coat.

These are "External" Signs that GOO's "Internal" ReCalibration is taking place. But Stay the GOO Course... the Battle Against your Animal's entrenched Allergies has Just Begun.

#### #6) Allergy is an Entrenched Mis-Wiring in the Immune System.

Because the Cumulative Progression of Allergy/Canine Atopy is often severely Entrenched by the time Doggy GOO is begun... And building Tolerance to your Animal's Offending Enviro Allergens cannot be Rushed and Takes GOO Time & Patience...And that it takes Time for Doggy GOO to "Internally" become Engaged / begin to ReCalibration to Manifest in Symptom Improvement.... It is suggested you contact your DVM to explore Itch Relief Measures to give Your Animal the Quality of Life It Deserves and Needs to Fight their GOO Allergy Battle.

It is GOO's Goal to Slowly / Slowly Wean down your Animal's Itch Relief MED Levels ( Under DVM Guidance ) with the GOO Goal to GOO Totally GOO As Soon As GOO Possible.

#### #7) GOO Pet Parents tell GOO that after Approximately 3 Months with Doggy GOO ( and GOO Gut Rescue ),

the major "External" Symptoms have substantially subsided ( Pls read #1 ) in the Animal. BUT Do NOT be Fooled, Now is the time to all the more Stay the GOO Course to all the more Dampen Down the "External " Allergy Flame of Allergy to a Sub-Symptom Level . So, Stay the GOO course at a STRESSed Level for at least another Month, more if you wish.

#### #8) At this Stage in the GOO Protocol, Pet Parents tell us that they have their Animal Back !

But because Allergy is a Nasty / Tenacious / Lifetime Chronic Disease, it is IMPORTANT to maintain a GOO presence in your Animal's System at a WELL Level to continually dampen down the "Internal" Allergy Embers that still reside, And to Keep them from being ReKindled Back into an External Allergy Flame once again.

#### #9) Wishing your Animal a Healthy GOO Glow ForEver !
